

PROJECT 1:

Deploying a web server in Windows instance

1) Windows IIS server main page

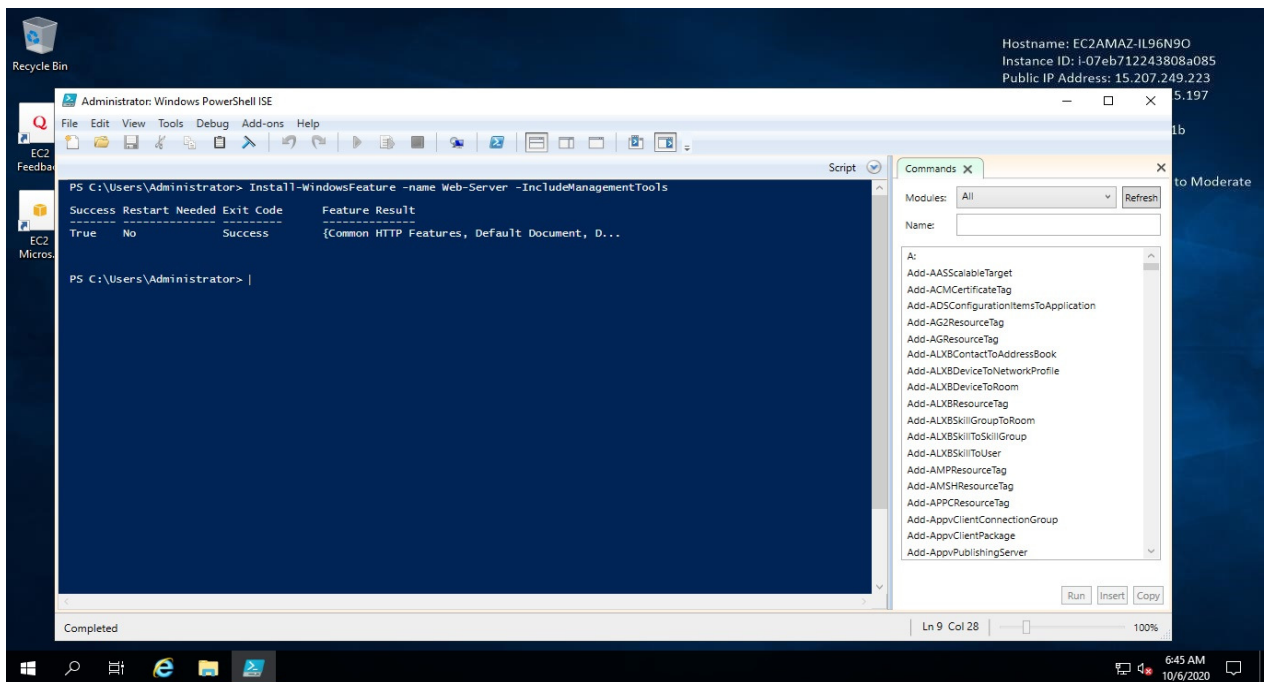

In above screen Public IPv4 address is ----15.207.249.223.

2) Result Page Windows machine lunch

3) Result Page Windows IIS installation done

4) Final result page entered public ip -**15.207.249.223** in internet browser.
Make sure matched the public ip – in result page and machine windows both are same.
